[Eudamonia Food Sensitivity Testing](#)

Note: Click [here](#) to see the list of items that get tested on the following allergy panels.

IgG Food Sensitivity Tests *Dry Blood testing	Lab Fee	Test Strips Needed
IgG Dried Blood Strip Panels		
96 IgG food panel - sample report	\$219.00	3
96 IgG food panel + Candida - sample report	\$250.00	5
Extra 16 IgG Vegetables (see items list)	\$82.00	3
95 IgG Vegetarian food panel	\$219.00	4
48 IgG Herbs & Spices	\$235.00	3
16 Mini-inhalants (see items list)	\$115.00	3
Celiac Profile (IgG, IgA-gliadin and IgA-TTG) <i>*Add-on to another food panel.</i> - *****	\$135.00	8
Celiac Profile (IgG, IgA-gliadin and IgA-TTG) <i>*Standalone</i> - *****	\$155.00	8
IgA Dried Blood Strip Panels		
96 IgA food panel <i>*Add-On to another food panel</i> - *****	\$155.00	3
96 IgA food panel <i>*Standalone</i> - *****	\$219.00	3
Extra 16 IgA Vegetables (see items list)	\$82.00	3
95 IgA Vegetarian food panel - *****	\$219.00	4

48 IgA Herb & Spices panel - *****	\$235.00	3
------------------------------------	----------	---

*12% HST will be added to all tests.

*\$12.95 will be added to cover the lab shipping fee.

*All prices in Canadian dollars.

*Read about the "[Food Sensitivity Testing - Blood Spot Test](#)"

*Please feel free to read the [Client Handout from Eudamonia](#) to learn more about IgG allergy testing.

[Stero-Chrom Allergy Testing](#)

*For all the "fixed" and "flexible" options, please refer the food lists at the end of the following chart.

Note: All allergy and food sensitivity testing done by **Stero-Chrom** can be done through the Dry Blood test or the serum test. The finger prick blood goes on paper discs for the dry blood samples or it goes in the 1ml micro-tubes for the serum testing.

Note: Click on the hyperlinks to learn more.

Blood Spot or Serum Testing	Lab Fee
IgG and IgE Allergy Tests	
92 foods panel: 90 IgG food panel + 2 " flexible " options (can be IgG or IgE) - sample report	\$180
96 foods panel: 90 IgG food panel + 6 " flexible " options (can be IgG or IgE) - sample report	\$199
45 Specialty foods panel: 43 IgG Specialty foods panel + 2 " flexible " options (can be IgG or IgE) - sample report	\$130
Individual allergy tests (6 tests minimum) – IgG and/or IgE *choose from the list of food items at the end of this chart	\$8.50
Gluten/wheat IgG and/or IgE Note: These tests are included with the 92 and 96 food panels	\$8.50
Total IgE panel Note: This panel checks for IgE antibodies in the blood, but	\$8.50

not for specific antibodies to food. If IgE antibodies are found, then a follow test that looks for specific antibodies will be required in order to determine which foods the IgE antibodies are for.	
Blood Spot, Serum and Saliva Testing	Lab Fee
IgA Allergy Tests	
Transglutaminase IgA (tTG IgA) panel – sample report (sample report shows how transglutaminase IgA test and other supplemental tests can be used). *this is testing for Celiac disease - see explanation below Handout for Dry Blood/Serum testing. Handout for Saliva testing.	\$35
Gliadin IgA panel - sample report *this is testing for non-Celiac disease Note: A person can have a food sensitivity to gluten or wheat but not to the Transglutaminase (TG) enzyme. Handout for Dry Blood/Serum testing. Handout for Saliva testing.	\$35

*12% HST will be added to all tests.

*\$12.95 will be added to cover the lab shipping fee.

*All prices in Canadian dollars.

*Please feel free to read the [Patient Information Sheet](#) to learn more about IgG & IgE allergy testing.

*Please feel free to read the **Patient Information Sheet (coming soon)** to learn more about IgA allergy testing.

Celiac Testing

Note: tTG IgA = IgA antibodies against the enzyme transglutaminase (TG)

This is testing for Celiac disease - which is when the body produces antibodies against Transglutaminase, the enzyme that breaks down the "gliadin" glycoprotein, which is part of the gluten molecule found in most grains or foods made from these grains. People with Celiac have an autoimmune reaction to this enzyme, but may not actually be allergic to the protein "gliadin", found in gluten/wheat.

[Anti-transglutaminase antibodies](#) to the enzyme [tissue transglutaminase](#) (tTG) are found in a large majority of celiac cases. Measurement of the anti-transglutaminase antibody can help establish or negate the presence of celiac disease in most cases.

[Stero-Chrom](#) offers:

- 45 Specialty foods IgG panel
- 92 foods IgG panel
- 96 foods IgG panel

- With the **92 & 96 foods panels**, 90 foods are **"fixed foods"** and cannot be modified. The remaining food items (92 panel = 2 AND 96 panel = 6) are completely **"flexible"** (can be IgG or IgE) and can be customized to suit each client from the categories listed below.
- With the **45 Specialty foods panel**, 43 food items are **"fixed foods"** and 2 food items are **"flexible"** (can be IgG or IgE) and can be customized to suit each client from the categories listed below.

Refer to the following list for the additional **"flexible"** food items to choose from. Note the list for the **"fixed foods"** as well (click on each one to view the items on each list):
